

CHAPTER SEVEN
ENERGY & TESLA

Fohat — Mind — Life Force — Eloptic Energy — Thought Force — E.S.P., and other names, have tried to express what little is understandable about an effect that manifests through all living things.

Even those few who do understand it, would want to attribute its universal essence to the Creative Spirit which makes all life eternal.

We have discovered that electricity and magnetism are the right and left hands of God, so to speak. Without electro-magnetic energies a Sun, or Planet, or a Solar System; an atom, or structures of the atom, living bodies, ants, or people, flowers, birds, or fish, *nothing can be* without these invisible forces of electricity and magnetism. In polarity response they both interchange with each other and one cannot exist without the other.

The mysterious energy that makes electricity and magnetism work, is perpendicular to both the electric and magnetic patterns, and establishes a third plane of reference which we call a "time zone." This "zone" is not detectable, or measurable, with standard electric or magnetic instruments. It responds to thought and can orient the magnetic pattern out of perpendicularity to the electric pattern. If the magnetic field exceeds 87° and coincides to the electric wave pattern, disintegration results in matter and it becomes energy. This occurs with no sound, or heat, or explosion, but will be accompanied by brilliant light emissions. Teleportation can be accomplished by this effect. Pure elements of matter can be created out of energy in the spectrum frequency of any element with controlled polarity reversal in the electric flow.

To our understanding this "zone" is Universal Mind which creates reciprocal actions between electric and magnetic effects. This "zone" being responsive to thought, makes it possible to understand how all matter from galaxies, to people and atoms, can be created by a Universal Mind, or Cosmic God, which is everywhere. This could explain the old expression, "never let your one hand know what the other hand is doing," because the other hand would set up an equal and opposite effect. This also would explain how a Supreme Infinite Intelligence could create matter and the physical universe out of the unseen energy. Mind had to come before matter, otherwise how can one explain the order of celestial bodies in unlimited magnitude down to the complete order in atoms.

Should one feel that they are infringing on God to try and understand his creations? Should one feel that it is "off bounds" to try to

find out how the perfect laws of the universe operate life in matter? There is no "tree of knowledge." Knowledge is in finding out what makes a tree a tree. Wasn't man supposed to have "dominion over all things"? Wasn't man given a "right of free choice" by God?

Three-hundred-trillion cells in one adult human body perform an interchange of biological electrical functions in such order that only a perfect Universal Spirit could direct their activities. No human study of effects in physical structure will ever reveal the causes of these effects, unless one works through the spirit in dedication to a beneficent purpose for mankind.

"This Other Energy" is the conductor of cell communication between all living things. Cleve Baxter's research proves the communication but it doesn't explain how it works. Cells do not have ears, but they do respond to thought.

The Hieronymus device proved that communication from cell structure in the astronauts in Apolla 8 and 11 had no loss in power from the earth to the moon. Hieronymus also proved plants would grow in total darkness by bringing "This Other Energy" into the darkness from metal plates exposed to sunlight *through wires* connected to metal plates over the seeds. *Light* does not travel through wires.

Franz Anton Mesmer, who was born in 1734, called "This Other Energy" "animal magnetism." Dr. D'Esion, Mesmer's chief pupil, formulated the laws of animal magnetism as follows:

1. Animal magnetism is a universal, continuous fluid, constituting an absolute plenum in nature, and the medium of all mutual influence between interstellar bodies and between the earth and animal bodies.

2. It is the most subtle fluid in nature, capable of flux and of reflux, of ebb and flow, and of receiving, propagating and continuing all kinds of motion.

3. The human body has poles and other properties analogous to the magnet.

4. The action and virtue of animal magnetism may be communicated from one body to another, whether animate or inanimate.

5. It operates at a great distance, without the intervention of any body.

6. It is increased and reflected by mirrors, communicated, propagated, and increased by sound, and may be accumulated, concentrated and transported." Is this "increase by sound" the reason for singing hymns in the churches?

"This Other Energy" was called "The Mumia" by Paracelsus. "The Odic Force" by Reichenbach, "The Nervous Ether" by Richardson,

"The X Force" by Eeman, "The Prana" by Indian Gurus, and is "Life Force" itself.

Form has a lot to do with the manifestation of "This Other Energy." Cones produce a cohesive transmission of this energy for miles. Minerals crystalize in their individual forms because "This Other Energy" requires exact order. Pyramids oriented in the planes of North, South, East and West, relative to their faces, will produce vortices and strange reactions in their center. An egg, out of its shell, in a saucer beneath a pyramid will have the albumen harden in less than a week, while another egg in a saucer outside the pyramid remains liquid.

If a circle of seven pyramids could be located equally spaced in vacant areas surrounding the Los Angeles basin, the smog could be eliminated. This would require seven masts 600 feet high and the top, or longest, guy wires would have to be on a 52° plane on all sides equivalent to the great pyramid of Gizeh in Egypt. The only disadvantage of this would be malfunction of some aircraft instruments if they flew over the masts. On the other hand they wouldn't cost anything to operate except the cost of their construction. We have tested pyramids made of welding rods at all four corners and they work as well in experiments as if the sides were filled in as with cardboard pyramids.

So much could be accomplished with the use of "This Other Energy" if the orthodoxy of educated scientists would investigate and accept those principles of nature that operate in life itself. No one seems to be able to break through that wall of self-inflicted ego that keeps science within the profit structure of a defunct economy, while humanity goes down to its own destruction in a chemical and radiation disaster.

It seems that today, the people who know how to do things are stopped in their tracks, by laws and opinions from authorities who don't know how to do things. Maybe this is the destiny of a planet that reaches for the Moon, when it needs something to divert the peoples thinking about the mess it has made on the earth. A hungry child cannot understand this philosophy. Disease, and poverty, and war are man-made results of wrong thinking over the years. "This Other Energy" can only respond, and reciprocate, according to the fixed laws of the universe. Education can only give from the past. The present must operate on inspiration and faith, or the future is lost.

A past civilization knew how to use "This Other Energy" to levitate anything, including themselves. It manifested in the Kings Chamber of the Great Pyramid to revive dead V.I.P.s in three days, or mummify their bodies if they failed to come back to life. This activity took 28

days, or one magnetic month. This is the reason the Kings Chamber was built off center in the pyramid, in order to be in the proper area of the energy generated.

Modern science, in their two-dimensional electro-magnetic science, cannot accept the fact that a handful of people, today, understand this third plane of reference.

Dr. Hendrick's cell therapy, in Switzerland, proved that organ cells, injected into the body, would only go to the same kind or organ in the body and fortify it.

People are as different as their fingerprints and "This Other Energy" makes them all live. How long are the authorities going to ignore the basic philosophy of life, known only to a few people, when it could add multiplicity to present life spans?

Over 30% more is being spent now, for weapons of war, than was being spent four years ago. This 30% spent in the right direction could have already unlocked so much more of the secrets of life and we could have already been on the road to 150 year life spans without aging.

Those few of us who understand "This Other Energy" continue to plod on at a snails pace, determined in our direction, to break trail for a heaven on earth in the future.

Tests conducted with vegetables growing in a garden, show remarkable results when they are grown under electro-magnetic stimuli. They've found that up to 30% more seeds will germinate after they have been in the ground for 24 hours. Growth of the crop to the time of harvest, is accelerated by several weeks. In some growing areas this makes it possible to plant the second crop sooner, thereby avoiding early freezes; as about 6 weeks can be gained on both the plantings to the time of the second harvesting.

Leaf vegetables and above-the-ground vegetables will be nearly twice the size of normal vegetables that are grown in uncharged soil. Root vegetables, like carrots, parsnips, etc., will not only be larger, but will have more flavor. Ball-shaped vegetables will not react *as well* as pointed root and pointed leaf vegetables. This includes head lettuce, cabbage, turnips and potatoes, among others. This is because their spherical shape accumulates the charge instead of permitting flow of the current to keep passing through them.

A device to perform this activity can be made as follows. Get a straight length (21 feet) of $\frac{3}{4}$ " diameter galvanized water pipe. Take a $\frac{3}{4}$ " standard coupling and weld a four-foot cross of $\frac{1}{2}$ " pipe on one end of it. The cross is to be horizontal to the ground when the coupling is screwed on to the top of the pipe mast. Solder eleven spikes onto

each arm of the cross — from center. These will be spaced 2 inches apart from the ends coming in, and each 9 inches long. These spikes are made from #10 copper wire and all point straight up. The top ends should be sharpened to a point by hammering, or grinding, before they are soldered on to the cross arms.

Solder 12 wires around the base of the mast, 18 inches up from the bottom end. This can be #14 bare copper wire, each equal in length to your garden radius. Screw the spiked cross onto the top of the mast. Connect four guy wires to the top of the mast at the center of the cross. Put an insulator on each guy wire six feet down from their connection at the top of the mast. Add ten more feet of guy wire to each of these insulators, and put another insulator on each of *these* wires. Drive four pipe stakes, at an angle to the ground, 15 feet from the mast and equally spaced about it. Fasten four guy wires to the stakes, each long enough to connect to the bottom insulators.

Dig a small hole for the mast. This hole should be big enough for a wide mouth large glass peanut butter jar. Be sure the *top* of this jar is above the ground level. Put a smaller glass jar in the peanut butter jar, and another smaller one in it; until the jar inside is just big enough to fit around the pipe mast. Slide the jars on the pipe mast lower end, set the mast up and attach the stake guy wires to the four lower insulators. Adjust the guy wires so the mast is vertical, but not tight enough to bend the pipe mast.

Now dig twelve, equally spaced, radial ditches out from the mast to the size of your garden. They are *not* to exceed 200 feet from the mast. These ditches should be deeper than the working depth of hoe or cultivator. Extend the twelve wires out and down these ditches and cover them up, after placing a stake at the outer end of each wire; so you can always tell where the wires are.

Now plant your rows radially from the mast in your round garden. Do not plant directly over the wires, as roots may entangle them. Rows should never be closer than four feet to each other on the inner end. Plant what you like best parallel to the wires.

This device works by activating the natural electric charge in the atmosphere and the earth. These charges being in unbalance (between the solid earth and the gaseous air) try to balance, thereby creating an electric flux in the mast and wires. The current in the wires produces a magnetic field around them, and brings about a gentle magnetic vortex perpendicular to the ground. This in turn creates accelerated ion and electric activity in the plants, and roots, which are in the vertical line of electric flux. Each vegetable then becomes a miniature atomic accelerator, and thus increases its own growth and current flow.

This device employs natural electric and magnetic principles and costs nothing to operate. It will stimulate growth over an acre of ground.

Glass jars 3 sizes Smallest one to fit ½" pipe mast loosely
That one inside of next one Second one inside of largest one

The greatest genius of all time is practically unknown in the annals of American history. Marconi, Edison, Bell, the Wright brothers, and Fulton, are known for their contributions to the scientific and industrial world by nearly everyone.

Nikola Tesla was born at Smiljan, Yugoslavia, on July 10, 1856. He was the inventor of alternating current generators and motors, the polyphase system of the transmission of power, and the four tuned circuit system which is the basis of radio transmission. He radio controlled a ship model in 1898. By this he laid the basis of all radio telemechanics. Tesla was 18 years old when Guglielmo Marconi was born in Marzabotto, Italy in 1874. Tesla preceded Marconi's radio discoveries by several years.
